

Penny Juice Redesign

A comprehensive case study on improving the user experience of a B2B e-commerce site selling concentrated juice to childcare centers

[Original Website](#)

[View Redesign](#)

Project Overview

This case study explores the process of redesigning the Penny Juice website, a business-oriented site selling concentrated juice to childcare centers. The website had significant usability issues despite its simple goal, creating an opportunity for meaningful improvement through responsive redesign.

Problem Identification

Analyzing usability issues and accessibility problems in the existing interface

Visual Design

Creating style guide and wireframes for multiple screen sizes

Implementation

Building responsive website with semantic HTML and CSS

[↓ See the analysis](#)

Usability Analysis

The original Penny Juice website suffered from several critical usability and accessibility issues that impacted user experience.

Original Penny Juice website featuring outdated design, poor hierarchy, and cluttered elements

Learnability Issues

- ✓ Animated GIFs and flashing elements create a confusing homepage experience
- ✓ Key information is buried beneath decorative elements
- ✓ Overlapping, illogically sequenced content categories confuse site navigation

Visual Design

Based on the identified issues, I created a comprehensive visual design system that balances professionalism with child-friendly elements.

Style Guide

01. LOGOS

02. BUTTONS

03. COLOR PALETTE

04. TEXT STYLES

05. ICONS

UI STATES FOLLOW CONSISTENT PATTERNS
Hover: Lighten by 10% | Active: Darken by 10% | Focus: Blue outline

06. CONTROLS

RESPONSIVE DESIGN PRINCIPLES
All elements use rem units and flex/grid layouts

Color Strategy

The color palette balances professionalism with child-friendly elements. The primary blue provides trust and stability, while the accent colors create warmth and energy.

Typography

Montserrat was selected as the primary font for its clean legibility and professional appearance, creating a clear information hierarchy.

Component Design

UI components are designed for consistency across devices with clear interactive states and accessible contrast ratios.

Responsive Mockups

Desktop

Optimized for large screens with expanded navigation and multi-

Tablet

Mobile

Responsive Implementation

Using HTML and CSS, I implemented the responsive design that adapts seamlessly across different screen sizes.

</> Development Approach

-  Mobile-first responsive design strategy
-  Flexbox and CSS Grid for adaptive layouts
-  CSS variables for consistent styling
-  Optimized images for faster loading

🧑 Accessibility Improvements

-  Semantic HTML structure with proper heading hierarchy
-  WCAG-compliant color contrast ratios
-  Keyboard navigation support
-  Alt text for all images

Reflections & Learnings

This redesign project provided valuable insights into creating effective, user-centered web experiences.

Balancing Aesthetics and Function

Creating a design that balances child-friendly appeal with professional B2B functionality required careful consideration of color, typography, and visual elements.

Responsive Design Challenges

Developing layouts that adapt gracefully across different screen sizes required thinking beyond simply shrinking content.

Accessibility as a Priority

Addressing accessibility wasn't simply a checklist item but a fundamental design principle that improved the experience for all users.

The Value of Style Guides

Creating a comprehensive style guide early in the process proved invaluable for maintaining consistency throughout the implementation.
